## Not Just for Diabetes: The Expanding Role of GLP-1 Receptor Agonists

**Aana Hampton-Ashford, PharmD**

PGY1 Pharmacy Resident  
Wellstar Cobb

There is no fee for this program

This program has been approved for 1 contact hour (0.1 CEU)

This program is an **Knowledge-Based CPE Activity**

**UAN: 0483-0000-25-013-L01-P/T**

**Target Audience:** This activity is intended for pharmacists and technicians

**Date:** June 18, 2025 **Time:** 7a-8a and 3p-4p **Location:** Wellstar CH and via MS Teams

**Learning Objectives:** At the conclusion of this activity, participants will be able to:

- **Pharmacist Objectives:**

- 1. Describe the mechanism of action and pharmacologic effects of GLP-1 receptor agonists.
- 2. Differentiate GLP-1 RAs based on their FDA-approved indications for type 2 diabetes, weight management, and cardiovascular benefit, sleep apnea, and renal disease.
- 3. Identify common and serious adverse effects associated with GLP-1 RA therapy and appropriate counseling strategies.
- 4. Identify off-label and potential future uses of GLP-1 RAs in conditions such as NASH, heart failure, sleep apnea and neurodegenerative diseases.

- **Technician Objectives:**

- 1. List the brand and generic names of commonly used GLP-1 receptor agonists based on their indications.
- 2. Identify common dosage forms, storage requirements, and administration considerations for GLP-1 RAs.
